

The experts at Loprest Water Treatment Company will work closely with plant personnel to make sure that the ion exchange resin and support products we supply meet your specifications and are delivered in a timely and reliable way.

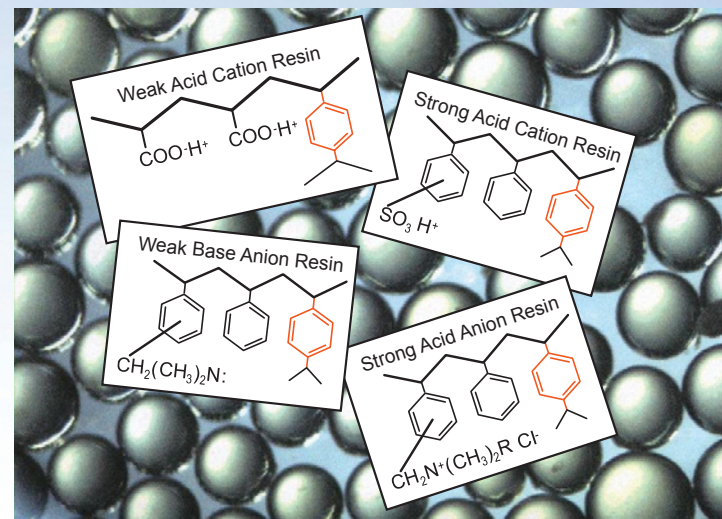

As equipment manufacturers and product suppliers for over 80 years we have delivered and supported water treatment systems throughout the world with leading edge technology. The industry has adapted to ever changing demands for higher quality water and the environmental impact of our manufacturing processes. Loprest continues to innovate and apply these technological advances to the equipment, products and services it offers its customers today and tomorrow.

## Optimize Your System Performance with The Resin Experts

Loprest Water Treatment Company has been providing ion exchange resin services and expertise to our customers for years. Monitoring system performance and tracking the changes in resin properties over time is invaluable in keeping your system operating at peak efficiency. As resins age, they lose capacity and become fouled or decrosslinked. Resins crack and break causing higher pressure drops across the bed. The kinetics of the ion exchange reaction can become impaired by organics in the feed water or other impurities. These are all normal consequences of the aging resin. At some point the extra chemical needed for regeneration due to shortened run lengths or the excess wastewater produced because of lengthening rinse times, increase operating costs to the point that resin replacement is necessary. The experts at Loprest can help with resin testing and evaluation. Through our relationships with the major resin manufacturers we are aware of new resin technology and market trends that should be considered when making replacement decisions. Let us help optimize your system performance.

### Services

- Technical Support
- Quality Products
- Same Day Shipment
- Regional Inventory
- Trouble Shooting
- Training
- Performance Evaluation
- Custom Packaging

### Support Products

- Activated Carbon
- Sand & Gravel
- RO Membranes
- Laterals
- Anthracite
- Greensand
- Garnet
